GEO634 — GEITE01X

NICHE TOPIC 1:

FOR FACT CHECKING WITH GOOGLE AND SOURCES:

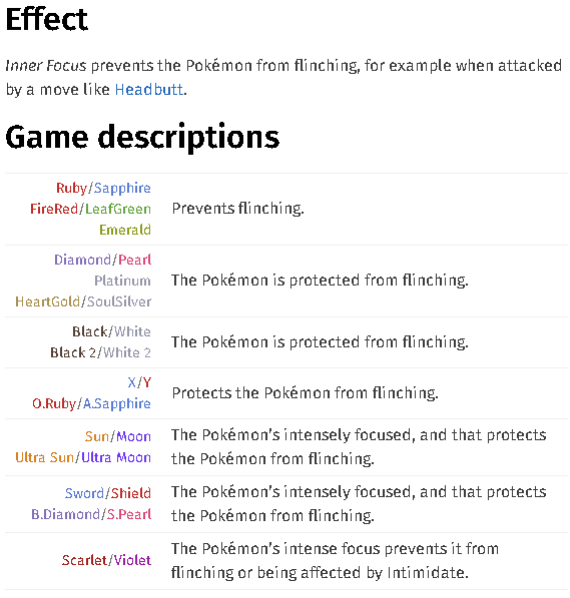

Effect

Infiltrator ignores the effects of Reflect, Light Screen and Safeguard. In other words, if the opponent has used Safeguard, Toxic would still badly poison them.

Game descriptions

Black/White Black 2/White 2	Passes through the foe's barrier and strikes.
X/Y O.Ruby/A.Sapphire	Passes through the opposing Pokémon's barrier and strikes.
Sun/Moon Ultra Sun/Ultra Moon	Passes through the opposing Pokémon's barrier, substitute, and the like and strikes.
Sword/Shield B.Diamond/S.Pearl	Passes through the opposing Pokémon's barrier, substitute, and the like and strikes.
Scarlet/Violet	The Pokémon's moves are unaffected by the target's barriers, substitutes, and the like.

Effect

Inner Focus prevents the Pokémon from flinching, for example when attacked by a move like Headbutt.

Game descriptions

Ruby/Sapphire FireRed/LeafGreen Emerald	Prevents flinching.
Diamond/Pearl Platinum HeartGold/SoulSilver	The Pokémon is protected from flinching.
Black/White Black 2/White 2	The Pokémon is protected from flinching.
X/Y O.Ruby/A.Sapphire	Protects the Pokémon from flinching.
Sun/Moon Ultra Sun/Ultra Moon	The Pokémon's intensely focused, and that protects the Pokémon from flinching.
Sword/Shield B.Diamond/S.Pearl	The Pokémon's intensely focused, and that protects the Pokémon from flinching.
Scarlet/Violet	The Pokémon's intense focus prevents it from flinching or being affected by Intimidate.

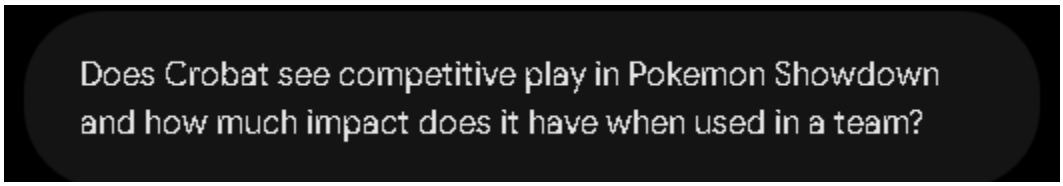

- Based on research upon fact-checking the original source Gemini has taken it from, it is correct in its research regarding its hidden abilities for Crobat, meaning that Inner Focus prevents flinching and intimidate

stat drops as well as Infiltrator going through defensive barriers such as Reflect, Light Screen, Substitute, Aurora Veil, Safeguard and Mist but not Protect, Detect, Spiky Shield, etc.

- Therefore it is correct in its generation towards it.

I continued asking AI for more information and niche topics regarding its generation of information

NICHE TOPIC 2:

On Pokémon Showdown, Crobat's competitive usage depends heavily on the format:

- **Gen 9 Formats:** Because Crobat is not present in *Pokémon Scarlet & Violet*, it is **completely unplayable** in standard Gen 9 formats (OU, UU, RU, NU, or VGC). It is only usable in **Gen 9 National Dex** or past-generation metas.
- **Past Generations & NatDex:** When available, Crobat rarely makes it to the top OverUsed (OU) tier due to mediocre offensive stats (Base 90 Attack / 70 Sp. Atk). However, it shines as a premier staple in **UnderUsed (UU) and RarelyUsed (RU)**.

Competitive Impact & Role on a Team

When used on Showdown, Crobat acts primarily as a high-speed utility disruptor and offensive pivot rather than a raw wallbreaker:

- **Fast Utility & Hazard Control:** A massive **Base 130 Speed** lets Crobat outpace almost the entire un-Boosted metagame. It uses **Defog** to clear hazards and **Taunt** to completely neutralize passive setup leads, hazards, and recovery moves from Pokémon like Chansey or Amoonguss before they can act.
- **Offensive Momentum:** Armed with **U-turn**, Crobat forces switches against Pokémon weak to Flying/Poison (like Grass and Fighting types) and pivots into favorable match-ups to maintain tempo.
- **Shield/Sub Bypass (Infiltrator):** Its **Infiltrator** ability lets it bypass moves like **Substitute**, **Reflect**, and **Light Screen**, allowing it to hit or poison setup sweepers hiding behind barriers. Fiction Horizon
- **Sub-Wallbreaking (Super Fang):** Because its raw offensive stats are mid-tier, it frequently carries **Super Fang** to instantly halve a defensive wall's current HP, opening up immediate KO opportunities for team sweepers. Fiction Horizon

FOR FACT CHECKING WITH GOOGLE AND SOURCES:

Gen 8 RU

Crobat @ Heavy-Duty Boots
Ability: Infiltrator
EVs: 220 HP / 36 Atk / 252 Spe
Jolly Nature
- Brave Bird
- Taunt
- Roost
- U-turn

Brave Bird is STAB (why the hell can it even learn this move, birds and bats are in completely different classes...). With Crobat's incredible Speed stat, Taunt is a must, blocking Stealth Rock, Trick, and Agility from Metagross, Parting Shot from Incineroar, Teleport, Recover, and Toxic from Porygon-2, and limiting Klefki to only one layer of Spikes. Roost is recovery and makes for a great pairing with Brave Bird. U-turn is for momentum and works very well with Crobat's extremely high Speed stat.

Gen 8 RU

Crobat @ Heavy-Duty Boots
Ability: Infiltrator
EVs: 252 HP / 4 Atk / 252 Spe
Jolly Nature
- Brave Bird / Super Fang
- Defog
- Roost
- U-turn

Brave Bird is STAB. You could run Super Fang instead to halve bulky Pokémon's HP. Defog clears entry hazards on your side. Roost is for healing. U-Turn is for pivoting.

Taunt/Roost + Offensive Pivot Crobat

Crobatgirl (Crobat) (F) @ Flyinium Z
Ability: Infiltrator
EVs: 252 Atk / 4 Def / 252 Spe
Jolly Nature
- Taunt
- Roost
- Brave Bird
- U-Turn

A less gimmicky set that can shut down stall teams due to the Taunt + Roost combo and Crobat's toxic immunity. Taunt cripples passive Pokémon that rely on status moves, such as Blissey, Suicune, etc. and makes them unable to recover. Roost restores 50% of Crobat's maximum HP, allowing it to recover from Stealth Rock damage, and switch into attacks more often. Brave Bird is for STAB and hits exceptionally hard when paired with Flyinium-Z. Sky Plate can be used if you already have a Z-move user. U-Turn allows Crobat to switch out while dealing damage, letting it act as an offensive pivot and gain momentum. Infiltrator allows Crobat to hit Substitute Suicune and Kyurem.

- From fact-checking again, it is accurate in its information in terms of its usage, with its moveset commonly having Super Fang, U-Turn, and Defog/Taunt and Infiltrator as its main ability for picks.

Did the AI make any factual errors or “hallucinate” any information (e.g., a fake source, a wrong date, an invented detail)? Describe what you found.

- It did not hallucinate any information regarding its research but has instead done it accurately. Although this may be possible because of a new prompt. When I use a different prompt, it has inconsistencies like imagining the wrong ability for Crobat and so on.

Do you think the response showed any signs of bias (e.g., leaving out certain perspectives, favoring one group, or relying on stereotypes)? Why or why not?

- No, not from what I can tell so far, it does not show any bias when I had run it through the protocol.

Based on this experience, would you personally trust this AI's output without double-checking it? Explain your reasoning.

- I would, especially since the website it has provided are legitimate and real. It is quite possible to link to older websites that are not able to function due to an older source or file.
